

Inv. no. 2/1972

BOTTLE, COLORLESS GLASS, WITH RELIEF-CUT DECORATION AND A GREEN AND BROWN OVERLAY

IRAQ OR IRAN; 9TH-10TH CENTURY

H: 23 CM

Instead of using the overlay technique, in which the craftsman cut into a glass body with two-colored layers (see 3/1971), he could apply sections of colored glass to the colorless glass and then cut them into the desired shape.

Glass objects made with this simpler technique often have a coarser finish than those made with the overlay technique, and the two layers are sharply defined because the glass was cut vertically and not diagonally.

The animals in brown and green glass on this bottle are coarser versions of motifs that first appeared on glass excavated in Abbasid Samarra. The colorless glass has a simple leaf and line ornamentation.
